

# VMC-Experience-Project

Project in Kenya and Uganda  
Activity report

## Education and information

to protect boys from genital mutilation by the  
Western-funded mass cutting programs and  
evidence-based protection against HIV.

Our Activities took place on 14/8/2018 in Eastern Uganda, Busia District, in Dabana and Mumunene towns.

Curiosity funding and collaboration added value and rigor to our successful efforts to held first anti-circumcision protest in Africa and to launch the first intact football club in the world with aim to empower African with potentially knowledge and skills to resist false and fake government policy that every born baby boy, children and infants must be circumcised to eradicate HIV in Uganda.

#### **The main activities that we carried were**

- One-creating anti-circumcision awareness through protests
- Two- creating anti-circumcision awareness through football match
- Three-people to people discussions and giving out reading materials and banner display.
- Visiting women groups on anti-circumcision awareness

Our program was to start with schools first but we had to change because schools were closing and schools were busy with end term examinations. So we had to develop education outreach through town protests and sports anti circumcision awareness through football.

The town anti- circumcision protests was aimed at the general public to sensitize them the danger of mass child circumcision to prevent HIV in Uganda as government policy demands every boy child must be circumcised to prevent HIV.

Our motto was very clear, there is no scientific evidence that circumcision prevents circumcised person from acquiring HIV AND STIs diseases, but there is scientific and medical clinical data evidence that circumcised people get infected with HIV AND STIs and they die of AIDS, millions and millions of circumcised live with HIV, are on ARVs, are treated of STIs and die of HIV worldwide.

Our hopeful message of hope to the general public was that Condom is the only scientific approved effective tool that prevent HIV, STIs and unwanted pregnancies worldwide and its has saved millions of people worldwide not to get infected with HIV and STIs and prevented millions of women and girls not to get unwanted pregnancies and HIV. So our stand was very clear to the general public that resist child mass circumcision as circumcision never prevent HIV its false and fake government policy. Use condom in HIV prevention and observes personal hygiene and of your child, in the sense we are protecting intact generation against brutality of circumcision.

Our team of 12 volunteers stage first at Mumune town demonstrating against mass child circumcision and distributing our anti-circumcision brochure to the people along the road to the Dabani town and giving brochure to the business people and youths. The demonstration was carried out in songs that criticized in manner circumcised was imposed on people against their culture and the way it's spreading HIV among circumcised people.

It took us 20 minutes to reach Dabani town from Mumunene town where we started our protests. Walking in protest against circumcision to our community

and what AIDS is doing to our community and number of orphan children increasing because of AIDS. Our two banners were displaced throughout our protest in Mumunene and in Dabani town as we protested through denouncing circumcision through songs.

These attracted many young people to come to know what is happening in towns. Condoms and anti-circumcision brochures were supplied to the general public.

The program is specifically target generally population that are deemed at risk for juvenile delinquency and to provide a gender specific approach that is focused on HIV/AIDS awareness, prevention and support services in a collaborative manner .

The mainstream government policy on eradication of HIV through mass male circumcision in Uganda is a false and fake destructive policy that has caused a lot sufferings, pains and deaths in Uganda, as those who work to implement this dangerous policy are aligned themselves with increasingly blatant lies peddled by the mainstream media sent shocking information that paralyzed the minds of the entire nation that circumcision prevents HIV. The Alliance of World Intact has been formed with the knowledge of truth to protect the entire nation from the lies of mainstream that circumcision prevent HIV. Our work is not only developing new programs to meet pressing community needs, but to also work at the community advocacy level.

The propose of project is to empower these groups through correct information and education concerning the widespread belief and wrong government policy that HIV/AIDS in Africa can only be eradication through mutilation of defenseless children, yet studies shows that same circumcised men in Kenya and Uganda die of AIDS.

Our sole purpose to carry out is to empower communities facing forced male circumcision to resist the lies and pressure from government and NGOs that are in business of mutilating children and youth with lies that they are eradicating HIV in Africa, neglecting effective tool that have saved many African population not to acquire HIV called condom use, this disaster belief and wrong government policy that to circumcise all children and youth will end HIV in Africa has total failed and is now being challenged and questionable by various institutions dealing with health and human right issues. Therefore our core stand on circumcision in fight against is that its failed tool to prevent or e even to end HIV as were told, what we are witnessing on the ground is the increase of HIV among circumcised youth and men, suffering

and pain among circumcised defenseless children and some end up dying from severe bleeding, there our stand is very clear that circumcision cannot prevent HIV, for this case we advocacy for abolition of safe male circumcision in war against HIV in Africa. We emphasis on effective use of condom in fight against HIV has demonstrated great success in HIV reduction and better health in Africa.

Throughout our awareness on anti-circumcision campaigns we are getting strong support from women and youths as women cite that circumcision has lead to their husbands and their youths to abandoned the use of condoms because of their addicted to mainstream lies

that circumcision prevent HIV and in end many of them suffer from HIV and many girls getting unwanted early pregnancies, big burden to their parents, majority of pregnant girls tests HIV, therefore they say circumcision has done more harm and they support banning of mass child circumcision in the war against HIV in Uganda.

The only way to stop mass male circumcision is try to reach out to the people. We are trying to convince people out of it. That is only the way we can fight circumcision, reaching to the really people talking and sharing with them the truths behind mass male circumcision. We can win this long struggle if we work with communities affected closely as our partners.

#### **Our success**

- We supplied more than 70 anti-circumcision brochures to all people we met and shared
- We launched and held first world intact football club and event that attracted more 100 people
- We printed more 15 tee shirts with anti-circumcision words.
- We supplied only three packets of condoms
- We made two big banners with anti-circumcision message
- We interviewed more youths on HIV/circumcision on videos
- We received more than 35 volunteers who willing to campaign against mass child circumcision.
- Community is in support of our activities
- We gave out Uganda shillings 200,000 to the first winning with one football
- We were able to provide bottle mineral water
- We launched our own organization called Alliance of World Intact in Uganda that will conduct all anti-circumcision activities.

#### **Challenges**

- We had less condoms to supply, this made some youth angered, saying that we want punish, if we say they should do safe sex using condoms and we don't provide condoms are we providing solutions?

- The demand for tee shirts was so high that many volunteers missed to get tee shirts even us official.
- We missed to have public address system
- Our intact football club lack uniform, playing shoe, footballs and medical kits.
- We had less mineral water as we are in droughts

#### **What we need**

- Our volunteers have no field bicycles, bags and two smart phones for field photo taking, video shooting and for communication.
- Our needs are bicycles, bags, tee shirts, condoms, phones, public address system, reading materials, footballs, medical kits, uniforms for our football clubman field allowances.
- And to hold world AIDS protests
- Anti-circumcision Football tournament on 26-27<sup>th</sup> December and 1 first of January 2019 campaign against mass male circumcision

Thank you so much for support you gave us to conduct this successful event in Uganda, together we can defeat circumcision and free children from this brutal monster. Together we resist mass child circumcision.

Please listen to the unheard voices from Africa!
